

Vienna, December 2014

FREQUENTIS and Partners Team up for SESAR 2020

Recently the SESAR JU selected a consortium consisting of the partners HungaroControl, Steria, Bull and FREQUENTIS, as candidate member for the SESAR 2020 programme. Now the consortium, led by FREQUENTIS, has been invited to participate in the dialogue phase.

The consortium encompasses stakeholders from each phase of the value chain: an ATM system manufacturer and integrator, air navigation and IT services providers as well as cybersecurity and software engineering companies. Each of the partners brings its core competencies into the broad range of intended activities. The team will address all phases of the SESAR Research & Development (R&D) process, from concept definition to validation, from verification to pre-industrialisation. Due to its unique composition, Frequentis and partners are generating added value for the SESAR 2020 programme.

The alliance aims to accelerate SESAR-compliant solutions development for Europe's future ATM system. This innovative approach includes the following areas of R&D activities:

- Performance optimisation through automation and big data analysis
- Human-centred applications
- Technology enablers like service-oriented architecture (SOA) for advanced voice and data communication, interoperability of validation platforms (Shared Virtual Sky) services and System Wide Information Management (SWIM)

About Bull, an Atos company

Bull is the trusted partner for enterprise data. The Group, which is firmly established in the Cloud and in Big Data, integrates and manages high-performance systems and end-to-end security solutions. Bull's offerings enable its customers to process all the data at their disposal, creating new types of demand. Bull converts data into value for organisations in a completely secure manner. Bull currently employs around 9,200 people across more than 50 countries, with over 700 staff totally focused on R&D. In 2013, Bull recorded revenues of €1.3 billion.

About SESAR

SESAR 2020 is a research and development project with a budget of 1.5 billion, which will contribute to delivering the Single European Sky. Through the implementation of a four-dimensional trajectory management (4D) the SESAR 2020 programme aims to triple airspace capacity to reduce delays; improve safety performance, reduce environmental impact by 10% and reduce the cost of ATM services to the airspace users by 50%.
